INTRODUCTION

This document outlines submission instructions via the Aqora portal.

The Quantinuum SG Grand Challenge 2026 is a three-month global quantum computing challenge bringing together researchers, developers, scientists, and industry experts develop real-world applications across science, AI, and industry. Participants receive training, mentorship, and access to Quantinuum technology, with finalist teams progressing to hardware access and a Grand Finale in Singapore.

EVENT TIMELINE

Phase 1 of the Singapore Grand Challenge will conclude on October 20th. Phase 1 consists of the platform utilization and shortlisting phase. The shortlisting phase starts on the 15th of October. This means users must submit their solutions by 15th of October 17:30 SGT via the Aqora portal.

Table 1: Detailed milestone schedule for the Quantinuum Singapore Grand Challenge.

Milestones	Date
July 20th	**Registration** Announcement, challenge format, judges and mentor selection
August 17th	**Education & Problem Formulation** Technical collateral for self-onboarding and platform education, mentor consultations, problem formulation
August 30th	**Platform Utilization** Emulator access, Guppy usage, Aqora datasets, written reports
October 15th	**Submission 1** Submission for grand finale. Judges will shortlist teams for grand finale. Participants submit solution, report and presentation.
October 21st	**Shortlist Teams** Finalists announced for the finale.
October 21st	**Hardware Access** Hardware access and further solution refinement
November 14th	**Submission 2** Finalists' submission for the finale.
November 19th	**Singapore Grand Finale** In-person presentations and winner announced

- **SUBMISSION INSTRUCTIONS**

Via Workspace Publish

Submit your solution through your **Aqora Challenge Workspace**. No separate submission form or email submission is required.

1. Open the workspace that you cloned for the challenge.
2. Select **Publish** to publish the version of your solution to be evaluated.
3. Select **Submit to Track** to submit the published version to the challenge.

You may update and resubmit your solution while the shortlisting period is open. Only the latest submission will be evaluated.

If **Submit to Track** does not respond or you do not receive submission confirmation, contact the **Grand Challenge Support Team**.

1. Open WorkSpace. This will have the path <username>/sg-grand-challenge.

This is typically the workspace that has been used to develop solutions.

2. Select Publish: Click the publish button shown below.

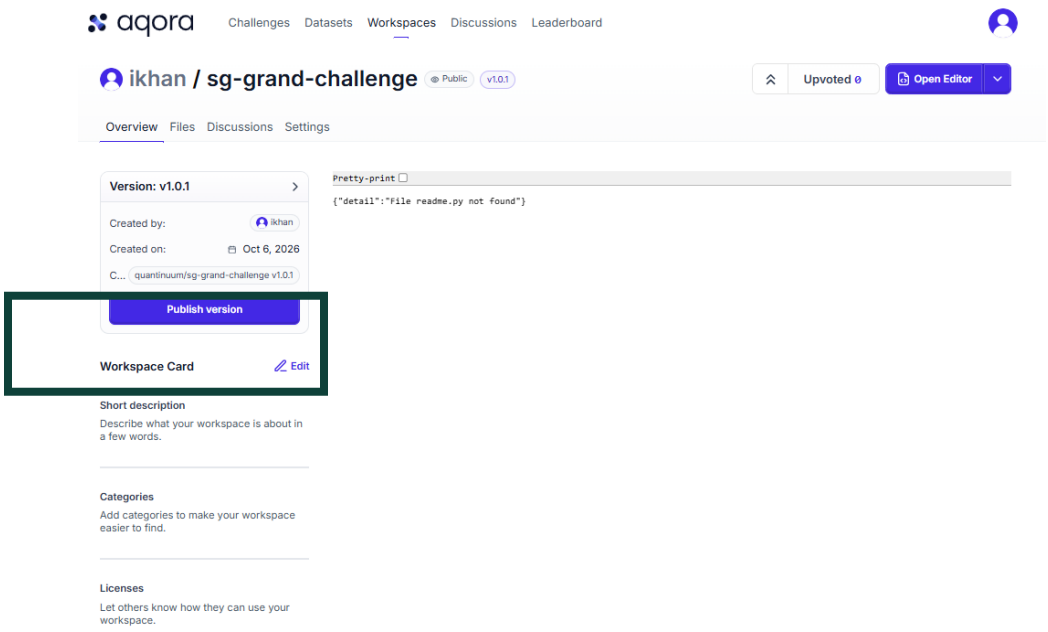

Fig 2: A visualization of the Aqora Marimo workspace.

3. Submit to Track: Submit the published version to the challenge.

Via Direct Submission

Visit the following URL below. Grand Challenge users will be able to submit solutions developed in local code browsers.

• SUBMISSION CHECKLIST

Before submitting, verify that your submission includes **all required artefacts**. A submission missing any required artefact will not proceed to scoring.

Code package

- Working source code in the challenge workspace
- README with instructions for running the solution
- Required dependencies and configuration

Execution evidence

© 2026 by Quantinuum. All rights reserved.

- Evidence of emulator execution, such as job IDs, logs, outputs, or plots
- Representative results from the solution

One-page summary

- One-page summary in Word, PowerPoint or PDF format
- Problem statement and approach
- Key results and relevance to quantum computing
- Potential impact

Final verification

- Submitted artefacts provide sufficient evidence to support the claims made in the solution
- **Publish** has been selected after the final changes
- The latest published version has been submitted using **Submit to Track**
- Submission confirmation has been received

FAQS

1. **Do I need to make my workspace public before submitting my solution?**
   No. You can submit your solution using a private workspace. There is no requirement to make your workspace public before submission.

2. **If I publish a private workspace, will it become publicly accessible?**
   No. Publishing a private workspace does not change its privacy setting. The workspace will remain private and will only be shared with the challenge jury for evaluation.

3. **Will other challenge participants be able to see my private workspace or code?**
   No. Publishing a private workspace does not make it or its code visible to other participants or the public. Only the challenge jury can access it.

4. **What does “Publish” mean for a private workspace?**
   In this context, “Publish” means creating a snapshot of the workspace version that you are submitting for evaluation. It does not mean making the workspace or its code publicly accessible.

5. **Do I need to submit a written report?**
   Yes. Participants must submit a written report in addition to the Aqora workspace and source code repository. There is no prescribed report format or page limit; include sufficient detail on the methodology, implementation, assumptions, validation, and results.

6. **Is there a page limit or required report format?**
   No. There is no page limit or required report format.

7. **How much technical detail should be included?**

© 2026 by Quantinuum. All rights reserved.

Participants are encouraged to provide as much relevant information as possible regarding their methodology, implementation, assumptions, validation, and results.

8. **Can I use Qiskit for my submission?**
   Yes. Qiskit can be used as part of your solution. Submissions are acceptable provided they can target the supported Quantinuum systems.

9. **Are Guppy or pytket required?**
   No. Guppy and pytket are not required. Any implementation approach that successfully targets the supported Quantinuum systems is acceptable.

10. **Can Qiskit be used with the H2-Emulator?**
    Yes. Participants can use the Qiskit-to-pytket conversion pathway to submit to the H2-Emulator. Guidance is available in the Quantinuum documentation.

11. **Which systems are supported for submissions?**
    Solutions should be compatible with one or more of the following:
    - H2-1E
    - H2-2E
    - H2-Emulator
    - Selene

12. **What execution evidence should be included?**
    Execution evidence should include solution outcomes, concise problem statements, job input parameters, source programs, emulator results, job IDs, logs, and resource estimates where appropriate. Each team is responsible for determining execution evidence required.

13. **What are the minimum deliverables for a submission?**
    At a minimum, participants should provide:
    - An Aqora workspace, GitHub repository or zip folder with source;
    - Source code repository;
    - Written report;
    - Evidence of hardware utilization.

SUPPORT

For questions or issues faced during the grand challenge, please contact QCSupport@quantinuum.com or use the Grand Challenge Discussion Feature on the Aqora portal.
